

I hope you're enjoying the awesome weather we have been having! No matter where you are in the Northern Hemisphere, growing season is here and the days are longer.

Since we began having a garden, we always had the goal of having everything planted Memorial Day weekend. Last year we got it done on my due date for our youngest daughter. She still came late! This year we were a bit behind due to needing extra equipment and celebrating our little one's 1st birthday.

Chris' dad was amazing and brought his tractor over to help us create our garden space. That thing has a 6ft tiller attachment and I wasn't even home to see it work! We were blessed with lots of rocks in the dirt, which made a simple project not so simple. After a neighbor stopped by to introduce himself, we found out that the original owner of the house dug out the lower driveway and placed all the rocks right where we decided to put our garden. It was bound to happen, it's just the luck we have. We also found out that our garden is the first one this property has ever seen and it seems to be getting a lot of attention. Talk about putting on some pressure to do justice to the house and property!

I also got to the herb garden, finally. I was determined to get it done all in one day and I was so close! It was finished the next day and it was worth it. Read more about it in this week's [post!](#)

I thought after that marathon that I'd be content with not getting my hands dirty for a few days. I failed horribly! Not only did I buy more plants, I also purchased an item I found on Craigslist for a future project. I may be allergic to cats, but plants treat me ok. Call me the Plant-Lady!

Take some time this week to channel your inner plant-lady and remember to #lovethelifeyoulive,

Christina
